HUMAN RESOURCE & EMPLOYEE PERFORMANCE MANAGEMENT

ABSTRACT

The Human Resource & Employee Performance Management system is a web-based platform that brings core HR operations into one place. It automates employee attendance and payroll, with daily check-in and check-out tracking, shift and overtime records, and payslips generated with allowances and deductions. Employees apply for leave online, managers approve or reject requests with instant notification, and leave balances are tracked in real time.

The system also supports performance evaluation by setting goals and KPIs, recording periodic manager reviews, and showing performance trends on dashboards to support appraisal decisions. Role-based access for Admin, HR, Manager and Employee ensures each user sees only the data they need, while encrypted document storage keeps contracts, IDs and certificates secure. Overall, the system reduces paperwork, improves transparency and protects sensitive employee data.
